

## 3-Tiered Prescription Drug Formulary January 2010

This condensed formulary is designed to serve as a reference guide and assist in the selection of cost-effective pharmaceutical products. This is not a complete list of drugs on the Formulary and listing is not a guarantee of coverage. Formulary listings are subject to change. Drug designation by category is for reference only and not clinical comparison. This formulary is not intended to be a substitute for the clinical knowledge and judgment of the medical practitioner in their choice of drug therapy. In all cases, the prescriber is expected to select appropriate drug therapy for the individual patient and provide high quality healthcare.

Drugs covered by the 3-Tiered Prescription Drug Formulary are assigned a low tier (1), middle tier (2), or high tier (3) copy. Generally, Tier 1 contains Formulary generic drugs, Tier 2 contains Formulary brands, and Tier 3 contains nonformulary or highest cost brand drugs. Generic drugs listed in tier 1 offer lower cost alternatives but are not all inclusive and may not be generic equivalents to the drugs listed in tiers 2 and 3. Certain drugs may be subject to Quantity Limits (QL), Step Therapy (ST), or Prior Authorization (PA) requirements according to Benefit Design.

The LDI National Pharmacy and Therapeutics Committee will regularly review the formulary to ensure it meets the needs of both patients and providers. Thank you in advance for your cooperation.

**IMPORTANT:** Medications listed in this formulary are subject to your plan coverage. If you have questions regarding what is covered by your plan, please contact LDI at (866) 516-3121 or your benefit representative.
